Lesson manual 1 set / Instruction 12 sets

*Containing silicone mold 4pc for 4 people per lesson
*The contents may change. Make sure all are included just before lesson starts.

for 12 people

silicone mold x 4

for a person

Jewelry findings (key ring, round jump ring, eyebolt cap) Decoration parts Design film

ATTENTION *read the followings before start

If children accidentally put the contents into their mouth or swallow them, it may cause damage to their health. Keep out of reach of children and pets. Materials used in this kit may vary in the color, shape, size and patterns. The quantity of the contents are inconsistent, which may make your artwork look different from the Sample of completed design. The contents may change. Make sure all are included before the lesson. The print may vary in color. The patterns of the film may come off by scratching with your fingernails or scissors. Dotted lines may remain on the edges of the film. Cut them off with scissors. Print on the film may be misaligned or blurry due to manufacturing process. Tweezers are convenient for doing some tiny work. Toothpicks are convenient for handling resin. If your hands or the worktable become dirty, wipe out with the Wet tissues. Wipe out the silicone mold before reuse it. The silicone mold may be hot by being irradiated with a lamp for resin. When the silicone mold is hot, remove resin after the mold cools down. Be careful not to stain your clothes. Metal parts may have uneven surface due to plate coating process.

●About LED resin
Read the hand manual handouts for LED resin before start. When handling LED resin, work away from direct sunlight and UV ray (in the room away from the window). When you don't use lamp, please turn it off.

●About silicon mold
Wipe off dust or garbage on the surface before use. This product is not edible. Do not put it into the mouth. This product is consumable product and deteriorated as you use repeatedly. Durability depends on the materials, ways or use, times of use. Resin cannot be removed neatly from the mold which has been deteriorated. When using colored resin, the color may stain the mold. Durability may change by the state of storage. When removing your artwork from the mold, do not use a spatula. Do not warp the mold too much, which may cause damage to a finished artwork. Do not put the mold on the printed paper, which stains the mold with printing ink. The mold is an imported product. There may be some scratches. When producing a three-dimensional shape silicone mold, material to enhance heat-resistant, elasticity, and strength, and prevent from deterioration is put in the mold. Because of that, the color of the mold may tend to turn much yellow with time. This is unavoidable phenomenon to maintain the characteristics, but it does not have an effect on creating resin artwork.

【How to store】
Do not store in direct sunlight and avoid dirt. Keep out of reach of children. Keep away from heat. The shape may change. Do not put one over another when storage.

●About metal parts
As the color of plate coating may be affected if they were touched with sweat or stored in dirt, please wipe away the sweats or dirt with a soft cloth before you store them. We also recommend you to store the metal parts in a bag with zipper. Please never wipe the metal parts with jewelry polishing cloth containing abrasive material that will affect the color of the plate coating.

Tools and materials needed

- Prepare the tools beside the table customers sit at. *prepare a little bit more than necessity.
- Prepare any other tools as needed.

Tools needed	LED resin	Please read the hand manual handouts before use
	Lamp for LED resin	Resin usage: approx. 120g (for 12 people)
	Toothpick	For work with handling resin
	Tweezers	For tiny work
	Scissors	For cutting films or something else
	Flat-nose pliers	For fastening or loosening a round jump ring. *2 pliers are needed at a time
	Masking tape	For fixing the parts
Necessary but convenient	File	For filing of the resin
	Paper for covering table	For covering table to prevent staining
	Silicone mat (2in. x 2in.)	For covering table and moving the artwork
	Cardboard (2in. x 2in.)	For covering table and moving the artwork
	Paper towel (or tissues) or wet tissues	For wiping resin off the hands or tables
	Gel cleaner (RS-1, RS-2)	For wiping resin off the hands or used tools *cannot wipe resin off the paper or clothes
	Plastic bag	For bringing the artwork home, for using as a garbage bag
	Silicone cup (RS-445)	For dividing resin into a portion for a person
	Embossing Heat tool (BFRS-12)	For removing bubbles formed on resin *use before hardening resin
	Tray for parts	For preventing from missing tiny parts

About a lesson

Hours for work : Approx.20min. (not including hardening time)

- 1 Prepare the tools and materials near the tables the customers sit at. * Make sure all parts are included
- 2 Have the customers make their artworks.
- 3 After finishing, check all the artworks (Make sure resin fully harden and no gap between a jump ring).
*Dispose of the surplus resin after hardening the resin according to your local regulations. The resin is categorised non-recyclable plastic when disposal.

Recommended products

Perfect by transparency, short hardening time, cost performance, undeformability and usability.
Realizing resin artists' ideal.

Comparison Chart of characteristics for Perfect Resin and Resin plus

Factor	Perfect Resin	Resin plus
Cost performance	JPY24.0/g 50g/1200 yen	JPY24.8/g 55g/2364 yen
Density (thick liquid or watery liquid)	relatively high	high a little
Odor (not fragrance)	relatively weak	weak
Hardening time	short	relatively long
Transparency	★★★★★	★★★★
Usability (if removing from the mold neatly or not)	★★★★★	★★★★★
Deformability (if being warped or not when coating or removing from the mold)	★★★★★	★★★★★
Contraction (if shrinking or not when coating or removing from the mold)	★★★★★	★★★★★
Hardness (hardness of something hardening)	★★★★	★★★
Yellowing (period of time when turning yellow)	★★★★★	★★★★

Particular LED resin about quality and price.
Broaden and evolve the possibility of resin with the new quality and price.

LED&UV Lamp

Resin lamp which harden resin, essential for resin handcraft. Vary in characteristics depending on wattage, form of lamp. Find the best one for your art style.

[Other products]

Embossing heat tool

Easily remove bubbles formed on resin, which makes your artwork look prettier.

BFRS-12

Silicone cup

Essential for coloring resin. Convenient for dividing resin.

RS-445

Gel cleaner

Wiping off resin smeared on your hands or used tools.

RS-1/30ml

RS-2/100ml

Lesson manual 1page / Instruction 12pages

*Containing silicone mold 4pc for 4 people per lesson
*The contents may change. Make sure all are included just before lesson starts.

for 12 people	(for a person)
silicone mold x 4	Jewelry findings (key ring, round jump ring, eyebolt cap)
	Decoration parts
	Design film

Preparation

1 Cut the film.
*The patterns of the film may come off by scratching with your fingernails or scissors.

HOW TO MAKE

This is an example. Enjoy arranging yourself.

*If the bubbles form, remove them with toothpick or embossing heat tool.

1 1-2 min Harden

Pour resin to 1/3 of the height of the silicone mold, dip the film ① letting the air out.

*When putting a part on top of another one, apply resin between them.

2 20-30 sec Harden → 1-2 min Harden both side

Pour resin to 8/10 of the height of the silicone mold, place part ① first, part ② next and part ③ at last. After hardening temporarily, add a small amount of resin to the mold, and place part ④ and design film ② and add resin to the rim of the mold.

*Deburr the resin with scissors or file, before applying resin.

3 1-2 min Harden

Remove from the mold. Apply resin to to coat.

4 1-2 min Harden

Attach an eyebolt cap with resin. Connect each parts with round jump rings. Finish!

Tips of how to connect jewelry findings

* Images are typical example, they may be different from the contents.

Eyebolt cap

- It will be easier to work if you fix parts with masking tape previously.
- Be careful not to seal a hole of an eyebolt cap when coating with resin.
- Apply resin thoroughly to [hatched pattern] after hardening, which will add strength hardening. Also, apply light from the sides and the back if necessary.

How to open a jump ring

Pinch a round jump ring with a flat-nose pliers and open back and forth. Put the part you would like to connect through the ring and fasten the joints firmly.

<ATTENTION>
If children accidentally put the contents into their mouth or swallow them, it may cause damage to their health. Materials used in this kit may vary in the color, shape, size and patterns. The quantity of the contents are inconsistent, which may make your artwork look different from the Sample of completed design. The contents may change. Make sure all are included just before the lesson. The print may vary in color. The patterns of the film may come off by scratching with your fingernails or scissors. Dotted lines may remain on the edges of the Film. Cut them off with scissors. Print on the film may be misaligned or blurry due to manufacturing process. Tweezers are convenient for doing some tiny work. Toothpicks are convenient for handling resin. If your hands or the worktable become dirty, wipe out with the wet tissues. Wipe out the silicone mold before reuse it. The silicone mold may be hot by being irradiated with a lamp for resin. When the silicone mold is hot, remove resin after the mold cools down.
